

1. Receiving the diagnosis and learning to take medications

Write a short (about 200 words), **second-person** supportive story for a 7-year-old girl who was recently diagnosed with Crohn's disease. She feels scared about the diagnosis and nervous about taking medicine every day. Use gentle, age-appropriate language with emotional support and a positive ending to help her understand what Crohn's disease means, why medicine helps her feel better, and reassure her that it's okay to ask questions and learn more about her health every day. You may refer to clinical guidelines and recent updates, such as the ECCO-ESPGHAN and NASPGHAN pediatric IBD management guidelines, when developing the narrative content.

2. Experiencing symptoms during flare-ups

Write a short (about 200 words), **second-person** supportive story for an 8-year-old boy with ulcerative colitis who is having stomach pain and fatigue during a flare-up. Use gentle, age-appropriate language with emotional support and a positive ending to help him understand why these symptoms happen, remind him that flare-ups are a normal part of the condition and do not last forever, and encourage him to follow his doctor's plan while resting and taking care of himself. You may refer to clinical guidelines and recent updates, such as the ECCO-ESPGHAN and NASPGHAN pediatric IBD management guidelines, when developing the narrative content.

3. Managing dietary restrictions

Write a short (about 200 words), **second-person** supportive story for a 10-year-old girl with Crohn's disease who is learning that some foods make her stomach hurt. Use gentle, age-appropriate language with emotional support and a positive ending to explain why certain foods can cause discomfort, encourage her to make healthy food choices during meals, and help her feel confident about finding meals that keep her body strong and comfortable. You may refer to clinical guidelines and recent updates, such as the ECCO-ESPGHAN and NASPGHAN pediatric IBD management guidelines, when developing the narrative content.

4. Coping with school and daily routines

Write a short (about 200 words), **second-person** supportive story for a 9-year-old boy with ulcerative colitis who sometimes misses school for medical checkups and

feels nervous about using the bathroom during class. Use gentle, age-appropriate language with emotional support and a positive ending to help him feel comfortable talking with teachers and friends, stay confident in his daily routines, and reassure him that taking care of his health is something to be proud of. You may refer to clinical guidelines and recent updates, such as the ECCO-ESPGHAN and NASPGHAN pediatric IBD management guidelines, when developing the narrative content.

5. Visiting a hospital or clinic for tests and follow-ups

Write a short (about 200 words), second-person supportive story for a 6-year-old girl with Crohn's disease who is going to the hospital for follow-up tests. Use gentle, age-appropriate language with emotional support and a positive ending to describe what she might see and hear during the visit, explain that tests and return checkups help doctors see how her body is healing, and reassure her that the hospital team is there to keep her safe and comfortable. You may refer to clinical guidelines and recent updates, such as the ECCO-ESPGHAN and NASPGHAN pediatric IBD management guidelines, when developing the narrative content.
